

# Microgrid Informational Meeting

Thursday May 13, 2021 at High Noon 12 pm PDT

Join us for a live Stream event from [Seattle Washington](#)

‘Microgrids What are they? Can I really get solar arrays, battery energy storage system, microgrid controller that will keep my facility resilient, sustainable, efficient, and with low or no upfront costs? Yes.’

- Find out firsthand from actual clients. We will talk with Mr. Thomas Keown General Manager Covington Water District how he used energy savings to drop his facility’s energy bill 80%
- Bob Williams will tell us how he was able to reduce energy costs, increase efficiency and build resiliency at his west Texas facility

## Bloom Energy Fuel Cell

### OUR NEXT SESSION WE WILL DISCUSS:

1. Fuel Cells – What are they and how do we integrate them into your facility as a Microgrid
2. Incentives and grants – Local and national – What are they and where can we get them?
3. Mini wind turbines – Is it right for me?

Our topics today will include:

- 1) Fuel Cells Oxide Bloom Energy
- 2) Geothermal Microgrids
- 3) Government Clean Energy Grants
- 4) Microgrids for Health Care Facilities

Next Steps – Why is important to act now? With your present energy bills we are able to do an initial evaluation and give you an idea of the cost savings and/or let you know if we are able to totally finance the complete project with long term power purchase agreements and incentives as an energy as a service where we assume all energy rate risks throughout the life of the contract. We enter in long term contracts with the local utility to buy back power from your facility for the life of the contract. We design, construct, maintain and own the asset during the life of the contract. You reduce your energy bills, obtain new assets, reduce your carbon footprint, increase efficiency, and build resiliency. It is a win win for all!

## Hydrogen Fuel Cells - How do they work?

### Check list:

Get started today to see if you qualify for no up-front costs for your new distributed energy resources (Microgrid).
