

# **Next Generation of Microgrids**

## **May 29, 2025, 7 am PDT**

### ***Live Stream Seattle Washington***

Join us for a session on the next generation of microgrids. Find out how AI is controlling the DERs (Distributed Energy Resources) and make determinations on power consumption, energy storage and selling power back to the grid. Find out how generative AI is adapting, changing and maximizing Energy out put without human intervention. Learn how these energy resources are being maximized and producing the correct amount of energy at the right time. The AI is also letting you know when predictive maintenance is required. Hear about the next generation of batteries that lasts 10 times longer and able to hold the charge for over 14 days. The AI microgrid controller can compute more data and make decisions faster and is more robust than previous models. Don't miss out! Can we secure a seat for you?
