IEEE Las Vegas Tech Conference Expo

Energy as a Service

April 21, 2023, 8 am

Join us for the Energy as a Service Session (EaaS). Gerry Vurciaga will be discussing Energy as a Service and Grid Modernization. Energy as a Service is where an organization comes in and builds, constructs, services, maintains, finances, owns, tests, commissions, supply, and designs the microgrid at low or no cost to the owner. Microgrids consist of solar photovoltaic arrays, wind turbines, fuel cells, and battery energy storage systems. The owner receives a low carbon, sustainable, energy efficient, resilient, microgrid at low or no cost. Gerry will discuss the \$Billions of dollars that he has to finance these microgrid projects. He uses energy incentives, and grants to further reduce the cost of these assets. He writes an energy service agreement with the owner where his organization would be responsible to provide a certain amount of energy from these DERs (Distributed Energy Resources: PV, wind) to the owner. In addition, Gerry's organization helps the owner write power purchase agreements with the local power utility company where the power utility company agrees to buy a certain amount of power back from the owner. Gerry will share with the group examples of this working today. The owner receives a low or no cost energy, efficient, sustainable, resilient energy generating system. It is a win win situation for the facility owner. Don't miss out on this exciting presentation. Find out how you may benefit from EaaS.
