

IEEE CN Smart Cities The Built Environment

June 16, 2023, 7 am PDT

Live Stream Seattle Washington

Buildings and infrastructure, cities and residents, physical and digital. The built environment gives the opportunity to work through the entire construction lifecycle of major projects, and explore new ideas through the lenses of policies and technological innovation. Solving problems, especially those potentially with great impacts. Smart Cities allows innovative thoughts to move technology forward.

Baoying Tong is an MBA candidate at the Wharton School of the University of Pennsylvania, and an investment intern at JLL Spark, Jones Lang LaSalle's corporate venture investment arm in property technology, in New York. As a Chartered Professional Engineer, he has worked in the Australian construction industry across various roles, including design and construction, project management, policy, and legislative analysis. He is passionate about the intersection of technology and the built environment and brings experience in product development, project design, research, and standardization of Smart Cities to this dialogue.
