AI Interpretation of the NEC

March 26, 2026, 7 am PST

Live Stream Seattle Washington

What is AI's interpretation of the code? Is it correct? Is it off by a magnitude or is it right on? Join your fellow humans as we interrogate the Chatbot. Are humanoids now able to design, construct, and maintain electrical systems? Are the AI electrical systems able to reconfigure themselves based on a wall change, a load added or subtracted from a panelboard, and/or able to automatically decrease power during a demand response? Come join us as we face off against our robot friends. Can our android save you a seat? Yes

Where will my job (function) be 2 years from now? How do I plan for my future? How do I use the AI to better service my client? Remember the giraffe. Those that adapted survived. Find out all these key issues at our upcoming session. **RSVP at**: https://www.mytechconference.com/event-details/ai-conference-with-nfpa-70-updates-2026
