IEEE AI IT Artificial Intelligence Symposium

November 3, 2023, 6 am PDT

Live Stream Seattle Washington

Find the latest trends in AI Artificial Intelligence. How is AI learning on its own? How are humans preparing for the future of AI? With ChatGPT taking over vast amounts of knowledge forming technology find out all the latest applications of ChatGPT, and how codes are being written. Amazon and Microsoft are teaming up to provide new and innovative AI applications.

Artificial intelligence is taking the world by surprise. Just like in the movies we saw 5 to 10 years ago the AI is taking over our daily life (Terminator). How is this possible? What codes are we using that makes this all possible. Who is the brainchild behind ChatGPT. This conference will get to the route of the master coders to enable such intelligence to form on its own by a bunch of ones and zeros. Also find out how this technology is escalating faster than humanly thought possible with the new quantum theory of an infinite number of selections based on color. Find out the latest on Machine Learning, protocol software and cybersecurity. Is AI creating its own code? Is AI really learning on its own? How are we humans preparing for the future of AI. Is AI able to stop cyber criminals. Where do we see AI and the human civilization 10 years from now 2033? Don't miss this great event. Speak with AI scientists, engineers, and data analysts.

AI Is this Artificial Intelligence real? How did we get to this point and where do we see AI taking us in 5 to 10 years? Find out today!
