

What is your building telling you?

June 24, 2026, 7 am PDT

Live Stream Seattle Washington

Join us for a session on monitoring & controlling your building. Whether it is Modbus, Niagara, BACnet or co-pilot you can monitor, and control your facility. Are your breakers tripping? Conference room too hot? Water pipe break? Natural gas lines not pressurized? Lights not dimming? Do you have a sick building? Join us for a session with Tristan de Frondeville. Find out if you have a healthy building? Are your energy bills going literally out the roof? Circuit breakers and relays tripping - sending the whole office crew home for the day? Are you using excessive amounts of water? Can't cool that conference room down to a cool point where everyone is comfortable? Too much carbon dioxide in the air? No worries, Tristan will hit on all these talking points. His organization has implemented the healthy building initiative where they come in and do a check-up on your building and recommend points to add to monitor your HVAC, electricity, natural gas, grease pits, rainwater and drinking water. He has saved his clients hundreds of thousands of dollars. Can we save you a seat? Yes

A senior executive with over 20 years of experience in Product Management, Software Development, Information Management, Internet Sales and Distribution, and Manufacturing. Successful in managing teams, developing company strategy, and implementing sales and distribution to achieve optimal results.
